

Portfolio Intelligence System

Basically AutoGen AgentChat runs on AutoGen Core to interact with each other

```
uv run .\world.py
```

```
warning: `VIRTUAL_ENV=C:\Users\saito\source\repos\AIAgenticEngg\.venv` does not match the  
project environment path `C:\Users\saito\source\repos\AIAgenticEngg\projects\agents\.venv` and will  
be ignored; use `--active` to target the active environment instead

```

We run world.py first => it invokes CreatorAgent first => CreatorAgent creates number of agents, using the AgentTemplate => CreatorAgent runs the created Agents => CreatorAgent returns message back to world => All results are accumulated => All results passed into EvaluatorAgent for final report => EvaluatorAgent writes final_report.md and returns back to world
