Hindi (Limited Working)

Certifications

Automate your workflows with
GenerativeAI

Software System design

ChatGPT Prompt Engineering for
Developers

Build AI Agents using Agentic
design-patterns and LangGraph

DevOps with AWS

Honors-Awards

European Union Scholarship for
Finance, Economics and Supply
chain

General Motors Scholarship
for Competitive Automotive
manufacturing

Ryerson Bursary Scholarship for
merit

IIE Best Research award

Best Research Award in economic
systems

Publications

Making lean manufacturing leaner
without capital investment

Sai Gopinath

Java developer | SpringBoot or Java + Cloud + AI
Greater Toronto Area, Canada

Summary

Doesn't Java standout? Looking for only Java interviews at this point. Java is a must, Java + AI is ok. I am really good at Full-stack development, Software engineering, Rest APIs, SQL. Languages: Java, JavaScript, jQuery, C, NodeJS, Typescript, SQL, HTML, XML, WebGL, Python, Agentic AI Tech stacks, MVC & Frameworks: 1. Java-based-Spring framework, JUnit, Hibernate, SpringBoot 2. Java-based-Xml, Android 3. Javascript-based-MEAN stack, 4. C#-based-Entity framework, ASP.NET, 5. Python-based-Flask, Django, FastAPI, CI/CD: Jenkins, Groovy, Python, Terraform Cloud deployments: Docker, Kubernetes, AWS, Azure Version control: GitHub, GitLab, AWS GitFarm, Bitbucket Agentic AI: LangChain, LangChain4j, LangGraph, SpringAI, MCP Data Engineering: AWS, Azure, PySpark, Redshift, Snowflake, Databricks, DBFS, SQLI am a double major - Computer Science (Not Data) and Engineering - scored excellence in both majors and in both USA and Canada. Won multiple Research awards in USA. Most importantly, I love to code—programming truly makes me happy. Solving problems has always been more than just a skill or career path for me; it's a passion and a hobby. I approach challenges not for titles or jobs, but out of genuine curiosity—and as a tribute to the field of Computer Science and the mentors and professors who've inspired and guided me along the way. <https://leetcode.com/u/Saigopin/> (Java) https://www.hackerrank.com/profile/sainath_gopinath (Java) <https://github.com/SaiGit-source/> (Java) <https://leetcode.com/sainathg5/> (Python) I've always strived for invention, and I believe society must rekindle its focus on true innovation. Given a fair chance (CNC/Robot Programmer - outdated, Simulation Engineer/PLM/ERP ABAP - outdated, Java/Cloud - current), at least I could have done something. In today's world, we're seeing fewer groundbreaking inventions, while large corporations are increasingly vulnerable—often shaken by favoritism, groupism, corruption. It's a reminder of why fresh ideas and ethical creativity are more important than ever. I am a natural and versatile programmer. I have programmed everything from large CNC machines / Robots to computers to small mobile

Lean manufacturing: Achieving quick response by enhancing ERP and Inventory management

A waste relationship model for better decision making in lean manufacturing

Characterizing waste in efficient lean systems with proportional financial ratios

Simulation and Optimization Framework for Additive Manufacturing Process

devices. Canadian citizen - don't require H1B sponsorship. Won full scholarships (academic merit-based) for all higher education across different continents (Asia, North America and Europe). Scored excellence across different continents consistently! am self-made and had 0% favoritism.0

Experience

RELX

Senior Software Engineer II

April 2025 - February 2026 (11 months)

Raleigh-Durham-Chapel Hill Area

IT Production Support for an AI Software application. Researched into production logs of Angular, .Net (Application) and Python (AI RAG Platform). Also analyzed A/B testing data and correlated with production issues. Observability Dashboards - Splunk, Coralogix, QuickWit, Grafana, ArgoCD, Jenkins, AWS, Copilot. API method development for model failover with multiple endpoints and System design for automated failover model config change. Content Ingestion in Solr using NRTTP

Centennial College

Java Consultant

November 2024 - April 2025 (6 months)

Canada

Helping out local startups (Fintech) and SMEs to build world-class software applications.

Technical requirements and specification definition, System architecture design, Solution design, Database design and Entity relationship diagrams, Operational cost estimation, Develop/test Java APIs, Lead and manage development teams, Setup dev/testing envs, Define frameworks, versions, dependencies, libraries. Maven build and deploy JAR. Build and deploy React App. Code review of Java/React. Tech stacks: React, Java Spring, AWS, Github

Axtria - Ingenious Insights

Senior Software Engineer

June 2022 - June 2024 (2 years 1 month)

New York, NY

US work authorization expired.

Tasks: New feature implementation (modified both Frontend and Backend implementations), QA bug fixes and Security vulnerability reduction

Full stack web development. Angular, Typescript, Python (Flask/FastAPI), AWS, Azure, Docker, Kubernetes, Terraform, Git, Updated backend frameworks and refactored code to implement new features, and to improve code quality using design patterns/dependency-injection.
Troubleshoot and fixed numerous QA bugs on time for customers. Hands-on SQL/PySpark experience with PostGres, Redshift, Snowflake, Databricks

Amazon Web Services (AWS)

Software Engineer I

July 2021 - June 2022 (1 year)

Seattle, Washington, United States

Backend development. Java EE.

Modified Java implementations/methods to improve performance, code quality, decrease API latency, and remove obsolete code

Digital Federal Credit Union

Software Engineer Intern

2021 - 2021 (less than a year)

Massachusetts, United States

Full stack development - Angular, NodeJs, AWS, Design patterns, Typescript, Object-oriented, Rest APIs, Postman

University of Massachusetts

IT Student Specialist

2019 - 2021 (2 years)

Greater Boston Area

Student job -

Database and reporting duties:

Updated university Oracle database and performed reporting in OBIEE (Oracle Business Intelligence). Worked with Salesforce and resolved student cases.

Updated course schedules in university database/webpages.

IT Admin / lab duties: Hands-on experience with computer hardware, BIOS, OS (Windows, Linux, MacOS), partitioning & formatting, OS File systems & structures, multiple-OS boot setup, trouble-shooting networks, computers and servers, security patches and OS updates.

Concentrix

Analyst II (IT & Reporting)

2017 - 2019 (2 years)

Ontario, Canada

Client : Nissan Motor Corporation Nashville TN, USA

Application development - Algorithm, Coding, Scripting for Report Automation
(basic Data engineering - Ingestion, Preprocessing, Transformation, Postprocessing)

Dashboard Analytics - Tableau, PowerBI, Sharepoint, Salesforce, MS SQL

ML and pattern detection - Apache Spark, Python and R Studio

Automotive

Production Worker

2016 - 2017 (1 year)

Toronto, Canada Area

Contract roles at Magna and Litens... Material handler: Handled auto parts for Honda and Toyota USA. Later Litens Toronto went into downturn

Magna International

Manufacturing Engineer (NPI)

2011 - 2013 (2 years)

Toronto, Canada Area

Company closed. SQL / Business analysis linking various databases from BOM to Sales to determine VSM inventory days. MOST time study to develop labor standards. Product costing and quoting.

Root cause analytics, Process planning, methods, Robotic cell design, assembly line design and optimization.

AutoCAD, Fanuc Robotics software (reachability and interference analysis), CATIA V5

launched new products for Ford motor company, General motors, Chrysler USA

General Electric Canada

Manufacturing Engineer (NPI)

2010 - 2011 (1 year)

Ontario, Canada

Company closed. Contract job. Process planning for Welding (FCAW, SAW, MIG, TIG, Spot) and General Assembly of generators and motors. Designed basic tooling/fixtures in AutoCAD

GE Six Sigma project in projection welding (saved \$102,000 investment + cost of quality).

University of Calgary

Research Assistant (Systems engineering)

2008 - 2010 (2 years)

Alberta, Canada

IT application development to make intelligent cost-effective decisions in complex engineering systems

Published 5 scholarly articles in Statistical Engineering / Decision Science in Institute of Industrial Engineers USA in a short period of time (like in a year)

Developed Simulation-Optimization models using MATLAB, VBA, FlexSIM, Arena (Digital manufacturing), Supply chain optimization

Machine learning, Numerical optimization, Calculus-based Optimization theory

Exposure to various Digital manufacturing software: Tecnomatix, Delmia, Robcad, Automod, FlexSim, SimPy, Promodel, Witness

Legrand Electric Italy

Industrial Engineer Intern

2008 - 2008 (less than a year)

Milan Area, Italy

Simulation modeling and DES in WITNESS software, Operations Research.

Developed Value-Stream mapping to identify the bottlenecks and areas of improvement then to assess the global impact of local improvements in the internal supply chain

TRW Automotive

Manufacturing Systems Engineer (NPI)

2005 - 2007 (2 years)

Chennai Area, India

CNC programming, PLC, process planning with Solidworks. Designed fixture parts in AutoCAD. Product costing. Fanuc, Sinumerik

launched new products for GM Trucks, GM Hummer, Ford and

DaimlerChrysler USA

Education

University of Massachusetts Lowell

Master of Science - MS, Computer Science · (2019 - 2021)

Toronto Metropolitan University

Post-grad Certificate, Big data processing & analytics · (2016 - 2017)

The University of Calgary

Master of Science, Mechanical Engineering · (2008 - 2010)

KTH Royal Institute of Technology

Master's degree, Business Administration and Management,
General · (September 2006 - December 2007)

Anna University Chennai

Bachelor of Engineering, Mechanical Engineering · (2001 - 2005)
